

On November 23, 2017 at the school library was held a lesson in Information Technology in 5B class. The aim of Mrs. Todorova and Mrs. Vidolova was to familiarize students with some basic principles related to the various digital competences. They presented a presentation with information on each of the competences to introduce children to the important rules to follow in order to develop their skills in the digital world. To resolve the case, they were divided into three groups. Their reasoning was extremely correct, which means they have high digital literacy.

At the end the scale showed that 73% of the class had an excellent grade for the hour and the rest were very good.

This unusual IT class is part of the National Safer Internet Campaign and is dedicated to the International Day of Tolerance.
